New nucleic acid encoding plant sugar-transport proteins, useful fo preparing transgenic plants with altered carbohydrate distribution.

Example 4; Fig 2; 54pp; English.

The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plants, i.e. of uning grain filling of annual field crops (e.g. rrice, soybeans, and wheat), and, for studying carbohydrate flows and sigar transport. The polynucleotide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence corn Beta vulgaris-like sugar transport protein

The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polymucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering thevel of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense orientation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABU08334-ABU08339 represent Beta vulgaris-like sugar transport proteins

The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or anticular and contentation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABU08334-ABU08339 represent Beta vulgaris-like sugar transport proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of plant polymucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polymucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polymucleotide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence represents a wheat Beta vulgaris-like sugar transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     358

or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence represents a rice Beta vulgaris-like sugar transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABU08336 standard; protein; 510

The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein

nucleic acid encoding plant sugar-transport proteins, useful for paring transgenic plants with altered carbohydrate distribution.
